SSB FM, Am, and CW never sounded so crystal clear! It restore the smooth sound of sinewaves that CW naturally generates and make it easy to copy. THE MFJ-281 ClearTone speaker was carefully designed to improve the intelligibility of speech in the frequency range of 600 to 4000Hz while reducing undesirable noise, static, and hum. A top grade 3" Mylar cone speaker is mounted in a well designed speaker baffle. A fine mesh metal grille allows sound to radiate without being muffled. 8Watts. 8 Ohms, 6ft cord, 3.5mm mono plug. Compact 3-3/4" x 3" x 2-1/4".

The Palstar SP30H ultimate communications speaker is a custom engineered speaker designed to match the sonic characteristics of the human voice. The SP30H can handle a maximum 25 Watts RMS of audio power. Measuring 11" wide X 8-1/4" high X 10" deep, the handsome wood cabinet is specially made for Palstar by a high-end custom cabinet shop, and features a beautiful stained and varnished wood veneer finish. The 6-1/2" speaker is optimized for 55Hz to 8kHz.

SWR Analyzers

1.8-500 MHz

Comet was the first to offer a wide-range SWR analyzer covering 1.8-500MHz including 220MHz band with the CAA-500. The CAA-500 is a very accurate, simple to use SWR and impedance analyzer to find antenna resonance and make quick antenna adjustments. The analog cross-needle meter displays SWR and

impedance simultaneously as you sweep the chosen frequency range, instantly providing the information needed. The NEW COMET CAA-500MarkII retains the cross-needle analog display and adds a full-color TFT LCD screen providing graphic and numerical SWR values along with total impedance with R and X values. FEATURES * Auto band-sweep function: Switch to the amateur band of choice and press the "Sweep Center" button. The chosen band is swept and SWR graphed in seconds. * Manual band sweep function: Select the band, select the center frequency, and select the bandwidth to manually sweep the chosen range * Multiple manual sweeps: You can overlay manual sweep results in 5 diffe

Take RF testing to the next level with the new MFJ-225! All the basic analyzer functions you've come to depend on plus a host of advanced features like built-in LCD graphics, two-port VNA measurement, PC-Interface using IG-minivan freeware, and precise DDS frequency control . . . Yet still easy-to-use! Out in the field, MFJ-225 is a compact completely self-contained handheld analyzer. On the bench it becomes a full-fledged two-port (S21) desktop machine when teamed up with your PC. Using powerful IG-miniVNA freeware, you'll run detailed data analysis and then print out stunning color-graphic plots to document your work! Tunes from 1.5 MHz to 179.9 MHz with rock-solid stability and no gaps. That's because the MFJ-225's VFO is a state-of-the-art programmable DDS (direct digital synthesis) generator with pin-point 1-kHz frequency resolution. DDS control means no mechanical band switches or tuning elements, just a reliable velvet-smooth optical encoder to glide across the spectrum.

MFJ-259D – World's most popular Antenna Analyzer just got better! Now covers super wide range – .28 to 230MHz - no gaps! Super easy to use! Just set the bandwidth and tune – just like your transceiver. SWR, Complex antenna Impedance and frequency are all instantly displayed simultaneously! The

MFJ-259C Gives you a complete picture of your antenna. Read SWR, return loss and reflection coefficient at any frequency all at once. Read Complex Impedance as series resistance and reactance(R+jX) or as magnitude (Z) and phase (degrees). Determine velocity factor, coax cable loss in dB, length of coax and distance to short or open in feet. Measure inductance in H and capacitance in pF at actual operating frequencies. The MFJ259D is an all-in-one ham radio test set Includes frequency counter, RF Generator, SWR Analyzer, RF Resistance and Reactance Analyzer, Coax Analyzer, Capacitance and Inductance Meter and more! Large easy-to-read tw line LCD screen and side-by-side meters clearly display your information.

a VHF conventional FM mobile transceiver that has all the features the FTM-3200R has, except C4FM Digital mode. The features include a ruggedly built yet compact VHF mobile transceiver, offering Yaesu's legendary mechanical toughness and high output power of up to 65 Watts. This new mobile is equipped with a heavy-duty heat sink that includes an extraordinary FACC; Funnel Air-Convection Conductor (Wind Tunnel). The FACC gathers cool air through a wide open front air-intake and concentrates the air flow to the critical final amplifier area drawn by a rear cooling fan. Thanks to its 3 Watts Front Panel Speaker, you can enjoy superior sound quality and stress-free communications - even in noisy and harsh environments. Like other ever-popular Yaesu VHF mobiles, the expanded receiver coverage of the FTM-3100R is 136 - 174MHz, and provides 220 memory channels with 8 Alpha-numeric Tags consisting of 199 "Regular" memories, one "Home" channel for a favorite frequency or repeater pair, and 10 sets of band-edge memories. This new mobile is very easy to operate

FTM400XD A built-in 3.5-inch TFT full color touch panel high resolution display provides excellent operability and visibility. The icon symbols, multi-function key display and pop-up messages are all displayed in high-resolution color thanks to the full-color, high luminance TFT liquid crystal screen. The settings and status of the wireless devices are displayed in an easy-to-understand format. You can perform various function operations simply and easily by gently touching the screen. Even taking snapshots and immediately sending them over your FTM-400DR is easy! Simply connect an MH-85A11U (option) microphone with camera. Press the microphone shutter button to take snapshots, and then the image data can be displayed on the screen, and easily sent to other C4FM FDMA digital transceivers.

FT891 The new FT-891 is a multi-band and multi-mode portable transceiver with up to 100 Watts of stable high output power. Carefully and intelligently designed to fit into an Ultra Compact (6.1" x 2.0" x 8.6") rugged case, the FT-891 includes many popular features typically found only in larger-sized HF transceivers. High reliability and durability are assured for long-lasting enjoyable operations on the HF bands, thanks to our state-of-the-art superb transmitter circuit design innovations for heat dissipation including a rugged die-cast chassis and efficient thermostatic-controlled dual internal fans. We believe the new FT-891 will be widely accepted as an ideal compact-sized and attractively priced HF/50MHz mobile; whether it is primarily used at home, as mobile in your favorite vehicle, or as a portable in the field.

FT65R The FT-65R and FT-25R are very compact and light, yet ruggedly constructed. Three selectable output power settings - 5W/ 2.5W and 0.5W. The Big Front Speaker provides a full 1 Watt of powerful very crisp and clear audio output in keeping with YAESU uncompromising pursuit of audio quality. The supplied 1950mAh Li-ion battery pack is capable of over nine (9) hours operation. A 2.5-hour Rapid Charger is included as a supplied accessory that fulfills the needs of most operators who want to have their transceivers ready for use at all times. Our newly designed large white LED displays for the FT-65R and FT-25R are vibrant and highly visible. Four (4) Quick Recall Keys (QRK) are individually user-programmable to store and recall favorite frequency settings and to be used as short-cut keys to Set Mode menu items.

VOX operation is available with the attractively priced optional Earpiece Microphone - SSM-512B. Other useful included standard features are: versatile scanning capabilities such as Programmable VFO Scan, Memory Scan, Priority Channel Scan, and Weather Alert Scan, WX Channels with "Severe Weather" Alert, PC Programming, Transceiver-to-Transceiver Cloning, FM Broadcast Receiver, Automatic Range Transponder System (ARTS), CTCSS/DCS Operation, Busy Channel Lockout (BLCO), Automatic Power Off feature, and Transmitter Time Out Timer (TOT).

IC7610 Whether it is poor band conditions, or battling to pick out a call in a large pile-up, faint signals have always been a challenge for DXers and Contesters around the world. The difference between putting the QSO in the log or having to try another time is the capability of your receiver. One key factor is the RMDR capabilities, the ability to pick out a faint signal in the presence of stronger, adjacent signals. The IC-7610 introduces dual RF direct sampling receivers, achieving 110dB RMDR, rivaling that of top-of-the-line transceivers. Other key features: High-speed, high-resolution, real-time spectrum scope on a 7-inch color display with DVI-D output for an external monitor. The DIGI-SEL preselectors, RF filters with sharp, narrow passband characteristics preventing Analog-to-Digital Converter overflow from large out-of-band signals when sampling the RF signals. More features are listed on the IA website and the brochure.

MFJ259D MFJ-259D – World's most popular Antenna Analyzer just got better! Now covers super wide range – 280kHz to 230MHz – no gaps! Super easy to use! Just set the bandswitch and tune – just like your transceiver. SWR, Complex antenna Impedance and frequency are all instantly displayed simultaneously! The MFJ-259D Gives you a complete picture of your antenna. Read SWR, return loss and reflection coefficient at any frequency all at once. Read Complex Impedance as series resistance and reactance(R+jX) or as magnitude (Z) and phase (degrees). Determine velocity factor, coax cable loss in dB, length of coax and distance to short or open in feet. Measure inductance in μ H and capacitance in pF at actual operating frequencies. The MFJ259D is an all-in-one ham radio test set Includes frequency counter, RF Generator, SWR Analyzer, RF Resistance and Reactance Analyzer, Coax Analyzer, Capacitance and Inductance Meter and more! Large easy-to-read tw line LCD screen and side-by-side meters clearly display your information.

MFJ915 The MFJ-915 RF Isolator is a 1:1 Current Balun designed to be placed in line with a 50-Ohm coax. The RF Isolator is effective from 1.8 to 30 MHz. It was designed to improve the performance of all amateur stations, fixed or mobile. MFJ-915 will reduce or eliminate stray RF often found on coax. This stray RF can cause burns and other problems with electronic equipment in ham-shacks and vehicles. Stray RF also results in a loss of radiated power from the antenna, which will lead to a great reduction in signal strength. Use of the MFJ-915 will increase the efficiency of all amateur stations. It's made up of 50 Ferrite Core Beads, placed onto a 13-inch piece of RG-303 coax. The coax and SO-239 connectors have Teflon(R) for maximum insulation and extended life of the product. The RF Isolator is enclosed in schedule 40 PVC pipe for maximum strength and protection.

MFJ998 The MFJ-998 Full Legal Limit 1500 Watt Intellituner takes you to the final level in automatic antenna tuners. With a capability of 1500 watts SSB and CW, coupled with automatic tuning, your high-power station can now operate essentially hands-free even when frequency and band changes are made. Fast Automatic Tuning The MFJ-998 instantly matches impedances from 12-1600 ohms using MFJ's exclusive IntelliTune™, AdaptiveSearch™ and InstantRecall™ algorithms with over 20,000 VirtualAntenna™ Memories. When you key your transmitter, MFJ's InstantRecall™ checks to see if that frequency has been used before. If so, tuning is instantaneous. If not, MFJ's IntelliTune™ algorithm (based on MFJ's efficient SWR Analyzer technology) measures the impedance, snaps the necessary components in place, and then fine-tunes the SWR. If the antenna impedance is outside the tuners measurement range, MFJ's AdaptiveSearch™ algorithm measures the frequency and determines only relevant component values – which are then searched for fast tuning.

MFJ1118 This is the MFJ-1118 Multiple DC Power Outlet — MFJ's most versatile and highest current Deluxe Multiple DC Power outlet. It lets you power two HF and/or VHF transceivers and six or more accessories from your transceiver's main 12 VDC supply. The MFJ-1118 has two pairs of super heavy duty 30 amp 5-way binding posts connect your transceivers. Each pair is fused and RF bypassed. Handles 35 Amps total. Six pairs of heavy duty, RF bypassed 5-way binding posts let you power your accessories. They handle 15 Amps total, are protected by a master fuse and have an ON/OFF switch with "ON" LED indicator The MFJ-1118 Multiple DC Power Outlet has a built-in 0-25Vdc voltage. Six feet super heavy duty eight gauge color-coded cable with ring tongue terminals. Binding posts are spaced for standard dual banana plugs. Heavy Duty aluminum construction.

MFJ1729 MFJ's Power Gain is ham radio's most powerful dual band magnet mount mobile antenna! It gives you outstanding gain on 440 MHz and 2 Meters. Low SWR lets you rig deliver full power safely. Get a whopping 2.6 dB gain on 2 Meters and 6.3 dB gain on 440 MHz. Perfect for dual band mobiles or HTs. Free BNC handheld adapter. Handles 300 Watts PEP. MFJ's exclusive 27" inch stainless steel SlimLineRadiator minimizes wind vibration for less SWR flutter — gives you longer range and better readability. Includes 12 feet of coax with PL-259 connector, heavy duty magnet mount with scratch resistant rubber guard.

MFJ1729 \$54.95

MFJ1778M The MFJ-1778M antenna is a multi-band center-fed dipole antenna capable of 1500 Watts. It consists of 52 feet flat-top fed with 17 feet of 450 Ohm matching section ending in an SO-239 coax connector. This antenna generally requires the use of a suitable matching network (antenna tuner) since the SWR of the G5RV JR. is almost certainly not 1:1 on any band. The use of a tuner will guarantee maximum performance from solid-state excitors. MFJ-1778M is a balanced antenna that is fed by an unbalanced coaxial line. This feed system causes unwanted parallel RF currents to appear on the shield of the coaxial feedline. A choke type balun such as the MFJ-915 should be used with this antenna to eliminate or reduce the undesirable parallel feed line currents. Failure to use a choke balun may result in RFI, RF feedback, or other symptoms of RF "in the shack".

MFJ870 MFJ Grandmaster SWR/Power meters are the Cadillacs of ham radio! If you simply will not settle for less than the best accuracy and precision these MFJ GrandMasters are for you. You get a large 3.25x1.25 inch precision illuminated meter for easy wide-angle viewing. A highly visible black and red meter scale on a bright white background makes it quick and easy to read SWR, forward or reflected power. Meter lamp requires 13.8 VDC or 110 VAC. Power pigtail included for wiring. A functional and simple front panel layout lets you select power ranges, bands or make SWR readings intuitively. The GrandMaster series feature an SWR scale that expands the full view of the meter 3:1 SWR is centered at mid-scale to give you precision and wide-range measurements. All GrandMaster feature peak and average, forward and reflected power readings and have selectable power ranges. Each GrandMaster is housed in an all metal cabinet with rubber feet and protected by durable speckled black paint. A designer injection molded grey front panel perfectly matches any transceiver. Air dielectric SO-239 connectors with gold plated center pins gives superb performance to beyond 525MHz. All GrandMaster Meters are precisely factor calibrated for accurate measurements. AT1000PROII The AT-1000Proll has an Auto mode that automatically starts a tuning cycle any time the SWR exceeds a limit you set. Also, there are provisions for two antennas; you can switch between them any time you need. For each antenna, there are 2,000 memories that store

tuning parameters for almost instantaneous tuner setting whenever you transmit on or near a frequency you've used before. Just key and it tunes! The AT-1000Proll will operate at any power level between 5 and 1,000 watts peak RF input. The AT-1000Proll has a large, easy to read bargraph with two selectable scale ranges (100 and 1,000 watts) as well as SWR meter. The AT-1000Proll will interface with many popular transceivers, enabling their TUNE button to control the AT-1000Proll's operation. Dedicated control buttons allow you to fine-tune capacitance and inductance on those rare occasions when the AT-1000Proll can't find a perfect match by itself.

AT100PROII The LDG AT-100Proll is the next step in the evolution of the automatic tuner. This desktop tuner covers all frequencies from 1.8 - 54 MHz, and will automatically match your antenna in no time. Updated features include an LED indicator for antenna selection and an LED to indicate when in bypass. It features a two-position antenna switch, allowing you to switch instantly between two antennas. The AT-100Proll requires just 1 watt for operation, but will handle up to 125 watts, making it suitable for everything from QRP to a typical 100 watt transceiver. The AT-100Proll includes over 2,000 memories for each antenna, automatically storing tuning configurations for each frequency and band as you use them. Frequency sensing circuitry lets the AT-100Proll "know" your operating band and frequency. Whenever you transmit on or near a frequency you've used before, the AT-100Proll can retune from memory almost instantly.

AT600PROII The AT-600Proll will handle up to 600 watts SSB and CW and 300 on RTTY (1.8 - 30 MHz) and 250 watts on 54 MHz. It features LDG's state-of-the-art, processor-controlled Switched-L tuner. It will match virtually any kind of coax-fed antenna, including Yagis, dipoles, inverted Vs, slopers, loops, just about anything. It will typically match a 10:1 SWR down to 1.5:1 in just a few seconds. You can also use the AT-600Proll with longwires, random wires and antennas fed with ladder line just by adding a balun. The AT-600Proll features two antenna ports with a front-panel indicator showing which is in use, and separate memory banks for each antenna. The optional M-600 4.5" analog meter shows FWD (100 and 600W scales), REV, or SWR in Peak or Average. Easy to read LED bar-graph meters showing RF power, SWR and tuner status, tactile feedback control buttons and an LED bypass indicator complete the user interface. Any power source from 11 - 16 volts DC can be used; the AT-600Proll only draws up to 750mA.

It will match virtually any kind of coax-fed antenna, including Yagis, dipoles, inverted Vs, slopers, loops, just about anything. It will typically match a 10:1 SWR down to 1.5:1 in just a few seconds. You can also use the AT-200 with longwires, random wires and antennas fed with ladder line with the optional LDG balun. The AT-200 features over 16,000 3D memories, automatically storing tuning data for frequencies and bands as you use them. When

you transmit on or near a frequency you've used before, the AT-200 can restore the tuning data almost instantly. It learns as you use it, adapting itself to your operating patterns for faster and faster tuning. The 3D memory system allows up to eight antenna settings to be stored for each frequency.

FTLMETER Yaesu's popular FT-857(D) and FT-897(D) transceivers are wonders of compact efficiency. These do-anything, go-anywhere transceivers were science fiction just a few years ago, but ham's today are using them in shacks, mobiles and on DXpeditions from the back yard to the top of the world. About the only problem with these radios is that we hams who are old enough to

remember when stuff like this really was science fiction are also old enough to wish that the display were just little bit bigger. Add to that a strong desire to see a real live meter needle bouncing on voice peaks, and you find yourself wishing that Yaesu had thought all this through when they designed the radio. Well, it turns out they did. A little known feature of these radios, noticed only by compulsive manual readers, is a meter jack on the bottom of the front panel. Well, help is here! The LDG FTL-Meter is a large, easy-to-read, plug-and-play solution to all of your metering needs. LDG's new version of its popular FTL-Meter presents a lush, highly readable 4.5 inch meter face with calibrated scales for signal strength and discriminator reading on receive, and power output, SWR, modulation, ALC action and supply voltage on transmit. Each function is selectable from the radio's menu.

RBA11 The RBA-1:1 Balun Current Balun was designed to allow easy interface of ladder line antennas and long wires to the LDG line of Automatic Antenna Tuners. The Balun operates "stand alone", thus does not require an LDG Tuner. It may be used with any of your long, random, or ladder line antenna projects.

RBA11 \$28.95

RU41 The RU-4:1 Unun was designed to allow easy interface of LDG S9 vertical antennas to the LDG line of Automatic Antenna Tuners. The 200 watt Unun also operates "stand alone", thus does not require an LDG Tuner for resonant verticals. It may also be used with many of your antenna projects where a 4:1 Unun is needed.

Z11PROII Meet the Z-11Proll, everything you always wanted in a small, portable tuner designed from the ground up for battery operation. Only 5" x 7.5" x 1.5", and weighing only 18 ounces, it handles 0.1 to 125 watts, making it ideal for both QRP and standard 100 watt transceivers from 160-

6 meters. The Z-11Proll uses LDG's state-of-the-art processor-controlled Switched-L tuning network. It will match dipoles, verticals, inverted-Vs or virtually any coax-fed antenna. With an optional LDG balun, it will also match longwires or antennas fed with ladder-line. The Z-11Proll has 2,000 memories automatically storing tuning configurations for each frequency and band as you use them. Frequency sensing circuitry lets the Z-11Pro "know" your operating band and frequency. Whenever you transmit on or near a frequency you've used before, the Z-11Proll retunes from memory almost instantly. Full auto mode tunes with SSB. Just speak into the mic and it tunes! Memories are retained indefinitely. Rugged and easy-to-read LEDs indicate SWR and status. The Z-11Proll uses latching relays which retain the tuned configuration even when powered down; current draw when not tuning is effectively zero.

Z11PROII \$154.89

Z817 The Z-817 is the ultimate autotuner for QRP radios including the Yaesu FT-817(D). The Z-817 interfaces to the CAT port (ACC) on the back of the FT-817 radio with the provided cable. Tuning could not be simpler; one button push on the tuner is all that is needed and the Z-817 takes care of the rest. It will switch to PKT mode, transmit a carrier, tune the tuner, then restore the radio to the previous mode! 2000 memories cover 160 through 6 meters. Of course, the Z-817 will also function as a general purpose antenna tuner with other QRP radios. Just transmit a carrier and press the tune button on the tuner. The Z-817 is powered by four AA internal Alkaline batteries (not included), so there are no additional cables required to use the Z-817. Latching relays are used so that power consumption is Zero when not tuning allowing a set of batteries to last about one year.

AL811 Ameritron's new AL-811 linear amplifier gives you plenty of power to bust thru QRM. You get a quiet desktop linear that's so compact it'll slide right into your operating position – you'll hardly know it's there. . . until QRM sets in. And you can conveniently plug it into your nearest 120 VAC outlet – no special wiring needed. You get three tough 811A

transmitting tubes, extra heavy duty power supply, all HF band coverage, pressurized ventilation, tuned input, dual illuminated meters, adjustable ALC and much more.

ALS1300 AMERITRON ALS-1300 is

a solid state near legal limit FET no-tune Amplifier. Get instant band switching, no tuning, no warm-up, no tubes to baby and no fuss! Reliability of the ALS-1300 is insured by using eight rugged MRF-150 power FETs. Ameritron's eight FETs are mounted on the dual heavy duty heat sink. They are properly arranged to spread out the heat over a large surface, something that other amplifiers using a single power device cannot do. Some FETs actually are a package of several transistors in one large case. This concentrates all of the heat in one small package. They not only are more difficult to cool, if one transistor fails they all have to be replaced. The ALS-1300 RF deck operates from 50 Volts for efficient, low distortion linear RF power service. It's cooled by a whisper quiet cooling fan. Fan speed is regulated by temperature sensors, assuring minimum noise for adequate cooling.

ALS1306 ALS-1306 runs up to 1200 Watts of clean SSB output power (just 100 Watts drive gives you the full rated 1200 Watts output) for continuous coverage between 1.5-54 MHz. 10/12 Meters is already included. Operator-friendly layout fits nearly any station configuration. The attractive desktop amplifier unit weighs only 22 pounds.

Compact 10"W x 6-1/2"H x 18-1/2"D inches. SWR Protection prevents amplifier damage if you switch to a wrong band, use the wrong antenna or have a high SWR. Over-power protection enables if output forward power or reflected power exceeds a safe level. Output power is automatically reduced to prevent amplifier damage by controlling ALC to exciter.

ALS500M Ameritron mobile no-tune Solid State Amp 500 Watts, Instant bandswitching, no tuning, no warm-up, SWR protected, 1.5-22MHz...

Just turn on and operate—no warm-up, no tuning, instant bandswitching. Compact. Ameritron's ALS-500M solid state mobile amp gives you 500

Watts PEP SSB or 400 Watts CW output! Covers 1.5-22MHz, (10/12 Meters with MOD-10M, requires FCC license). Virtually indestructible! Load Fault Protection eliminates amplifier damage due to operator error, antenna hitting tree branches, 18-wheeler passing by. Thermal Overload Protection disables/bypasses amp if temperature is excessively high. Auto resets. Typically 60-70 watts in gives full output. ON/OFF switch bypasses amplifier for "barefoot" operation. Extremely quiet fan comes on as needed. Excellent harmonic suppression, push-pull output, DC current meter. 13.8Vdc/80Amps. AL1200 What makes Ameritron AL-1200 stand out from other legal limit amplifiers? The answer: a super heavy duty power supply that loads at full legal power - it can deliver power of more than 2500 watts PEP two tone output for a half hour! The heart of the AL-1200 power supply is a highly efficient Peter Dahl tape wound Hypersil transformer weighing 32 pounds. – it's equivalent to a 45 pound transformer using standard E-I laminations.

AL1500 The Ameritron AL-1500 Linear Amplifier will deliver 1500 watts CW output with only 65 watts drive. It gives you the herculean 3CX1500/8877 tube for full legal output with minimum exciter wear. The AL-1500 also features time delay starting to protect the tube and over-current shut off to remove the drive if mistuned. A commercial grade die cast ball bearing blower provides quiet operation at full rated airflow to maximize tube life.

AL811HD AL-811HD gives you the AL-811H with four 572B tubes installed. Get a higher power tank circuit and grid overload protection. Grid Overload Protection protects the tubes from excessive grid current due to mistuning and it protects against excessive drive power. Four 572B tubes give you more plate dissipation than a single 3-500Z tube. AL-811HD gives you 800 Watts

output in SSB and 600 Watts for continuous duty in CW, RTTY, SSTV and AM operation. AMERITRON mounts the 572B tubes vertically, not horizontally, to prevent hot tube elements from sagging and shorting out. Others, using potentially damaging horizontal mounting, require hard-to-find 572B tubes to retard harmful sagging and shorting.

AL82 The Ameritron AL-82

Linear Amplifier is designed to give you years of trouble free service at the full legal output power limit. An 1800 watt continuous commercial rated Hypersil transformer is standard with heavy duty rectifiers in a full wave bridge supply with computer grade capacitors. Two bias settings allow either high efficiency RTTY and CW operation at 1500 watts of output at nearly 70% plate efficiency or low distortion 1500 watts PEP, SSB or SSTV output.

RCS10L Ameritron's Remote Coax Switch with Lightning Protection lets you remotely switch up to eight HF antennas – so you can replace 8 coax feedlines with a single coax. Eliminate a tangle of troublesome coax and have a simple and neat installation – with just a single coax feedline! The RCS-10L also has added lightning protection to each antenna port. This will protect each antenna from one another and prevent damaging voltages from traveling the feedline into the shack if a lightning strike accrues to the antenna. The RCS-10L consists of two units – the weatherproof switching box that mounts on your tower or mast and the control unit that's placed at your operating station.

RCS8VL RCS-8V HF to VHF/UHF Remote Coax Switch

Ameritron's Remote Coax Switch lets you remotely switch up to five separate antennas using one inexpensive small control line (like standard telephone wire). Eliminate a tangle of troublesome coax and have a simple and neat installation with just a single feed line. The RCS-8V consists of two units, the weatherproof switching box that mounts on your tower or mast and the control unit that's placed at your operating station. VSWR is less than 1.2 from DC to 250 MHz and less than 0.1 dB loss at 150 MHz, great for the HF/VHF/UHF operator. It handles over 5 kW below 30 MHz and 1 kW at 150 MHz. You can ground unused positions or leave them open. The indoor control unit is all metal to prevent RFI and TVI. It also has LEDs to indicate the antenna you've selected. A Lexan scratch-proof panel has a markable surface for labeling your antenna positions.

ARX2B The Ringo Ranger II has more gain, less windload, and more mechanical integrity than other two meter antennas. You'll quickly appreciate the benefits of this amazing antenna! Based on the original W1BX Ringo, the Ringo Ranger II is the latest design featuring three 5/8 wave radiating elements and an adjustable 1/8 wave phasing stub. The result is a very low angle of radiation over your coverage area. The Ringo Ranger II has built-in lightning protection, UV-stabilized insulators, heavy wall tubing, improved decoupling radials to eliminate feedline radiation, and all-weather performance.

13B2 13 Element Wideband Boomer The A13B2 is as versatile as the A-17B2 is specialized. A13B2 will be your choice for high performance across the entire 2 meter band. New and experienced hams will enjoy 15.8 dBi gain on FM, packet, CW, or sideband across the 4MHz operating range. The A13B2 is easily mounted vertically or horizontally for maximum performance on your favorite mode. Its optimum boom length makes it a popular antenna that fits just about anywhere. The new UltraMatch balanced feed on the A13B2 provides a 50 Ohm match via a standard SO-239 UHF female connector.

R9 Cushcraft R9 covers 6,10,12,15,17,20,30,40,80 Meters NO GROUND SYSTEM OR RADIALS NEEDED RUGGED CONSTRUCTION INSTANT BAND CHANGING SLIM LOW PROFILE SILHOUETTE This multiband vertical designs provide 9 band coverage encompassing the 6, 10, 12, 15, 17, 20, 30, 40 and 80 meter bands. Cushcraft achieved a major breakthrough in the development of an HF multiband vertical antenna that has been specifically designed for use with a tuner and amplifier. As a result, the antenna more accurately addresses the needs of the contemporary ham shack. Multiband vertical antennas have always been complicated designs with components as likely to be damaged by high levels of mismatched transmit power as the rigs they are attached to. Before the use of tuners became widespread, the antenna was protected by the same safety mechanisms that protected the rig. Now, the automatic power reduction circuits of the past have actually become a second layer of protective circuitry. Although the auto-tuner provides the ham with a more versatile device as well as protecting the rig's components, the antenna is more vulnerable than ever. With the press of a button, very high loads can be imposed on the antenna. The result to the antenna can be catastrophic failure in some instances.

PALSTAR

AT2K A newly-designed, smaller
roller inductor allows the AT2K to tune
6 Meters. Newly designed capacitors
feature lower minimum capacitance
for improved high band performance,
while maximum capacitance has

been increased to 400pF for better low band performance. In addition, the Peak/Peak
Hold metering from the PM2000A (a \$149.00 value) has been incorporated into the
AT2K. The AT2K matches dipoles, center fed doublets, Verticals, end-fed wire, delta
loops, beams, Windoms, Inverted V's and an optional external 4:1 or 1:1 current balun
for balanced wire feeders can be purchased. The AT2K features a 6 position ceramic
wafer antenna selector switch. Forward power metering is in two ranges, 300 and
3000 watts. A Peak/Peak Hold metering function is also provided. Standing Wave
Ratio measurements are displayed with an illuminated cross-needle meter. SWR is
read directly from the meter face where the Forward and Reverse needles cross. Add
11 Ga. (.090" thick) indite-treated aluminum metalwork and durable powder coated
finish on the front panel and top cover, and you have a tuner that will grace your shack
for years to come.

AT2KD An optional 1:1 or 4:1 current
balanced balun can also be purchased,
which can be easily connected externally
to the tuner. This new tuner has all our
features, such as: peak and peak-hold; a
resonant free roller system to operate

from 6m to 160m continuously; new LED lit meter system; and a new compact size.
Power rating 2000 watts pep, Frequency tuning range 160m to 6m, Impedance
matching range 20 ohms to 1200 ohms, Easy and quick tuning with only two controls,
6 position mode switch for multiple antennas, Active Peak and Peak Hold dual cross-
needle metering (1-2 sec hold) with LED backlighting, Meter power range 0-300 watts /
0-3000 watts, Differential capacitor tuning with 2 stators and 1 rotor (420 pF - 13pF -
420pF @ 5kV), Palstar designed ceramic body roller inductor, High power ferrite 1:1 or
4:1 current balun (Optional) Externally Installed, Powdercoated front panel and top
cover, 12 VDC Wall transformer supplied

AT4K The word is spreading about Palstar's
unique, high-end amateur radio products. Carrying
on in the Palstar tradition for products of the highest
quality designed by Hams for Hams. The American
made AT4K tuner is no exception. The American
made AT4K is an impedance matching network that

fills the void for a matching network that can provide unbalanced/balanced output. This
is a one-of-a-kind unique dual-function high-power tuner in the American Ham
tradition. The typical unbalanced tuner with a 4:1 balun at the OUTPUT exposes the
balun to a wide variety of impedance and reactance that it was never designed to
handle. The solution: the AT4K. The AT4K T-matching network utilizes a 1:1
unbalanced-to-balanced transformer in the INPUT of the network. When the network
is properly tuned, a 50 ohm impedance will be presented both to the input and output
of the balun, which allows it to properly perform its important transformation job 2500W

AT5K The American made AT5K is a one-of-a-kind unique dual-function high-power tuner in the American Ham tradition. This tuner has been nicknamed the "Rock Crusher" and is fast becoming the tuner of choice among "Hams" who demand the very best and most powerful antenna tuner on the market. The typical unbalanced tuner with a 4:1 balun at the OUTPUT exposes the balun to a wide variety of impedance and reactance that it was never designed to handle. Palstar's original solution was the AT4K. The AT5K takes power handling to the next level coming in with a rating of 3500 watts single tone continuous performance with low losses & wide Z range. Bands 160m to 15m with limited Z range on 10m. The AT5K provides balanced OUTPUT with high power 5kW TEFLON cable balun at the INPUT of the tuner circuit for excellent balanced feed antenna operation. Inside the AT5K you'll find massive custom large plate (600 pF) variable capacitors at 6 kV. Equally massive 10 Amp 7 kV CERAMIC body inductor wound with #10ga plated copper wire with silver-plated wheelshaft, contact wheel, and hardware (35uH). Also, Palstar engineering has incorporated the technology found in our popular PM2000A wattmeter into this tuner to provide dual cross-needle metering with active peak and peak hold (\$149.95 value)

HFAUTOTUNE The long-awaited Palstar HF-AUTO auto-tuner has finally arrived. Hams have enjoyed the benefits of low power auto-tuners for years, but now Palstar takes it to the next level and offers auto-tuning with a power rating of 2 Watts to 1500 watts. Like all Palstar products the HF-AUTO was designed by Hams for Hams carrying on the Palstar tradition for high-quality products designed and made in the USA. Auto-tuners have been around for years, but most of them use clacking relays and lumped components so that the match is always just a little bit off. Palstar reinvented the auto-tuner with continuously variable components for a perfect match every time, and capped it off with a power rating of 2 Watts to 1500 watts.
